When someone you love
faces Alzheimer's or
another form of dementia—
Turn to Stages

STAGES – *the Center for Geriatric Cognitive Functioning*

We can help you avoid future crises by being proactive now.

Stages, the Center for Geriatric Cognitive Functioning, is unique and much-needed in our region. Too often patients, their families, and other caregivers don't know where to turn when Alzheimer's or other forms of dementia are suspected, or when a loved one has received this diagnosis.

Now patients, in conjunction with their caregivers, have a physical place to come to that is designed to help them cope with the many challenges they may face—a place where they can be advised by a board certified specialist who is expertly trained and who understands. Now they can *turn to Stages*.

We know that early detection of cognitive problems in older adults, appropriate therapeutic treatments, and an individualized management plan are all vital to a good quality of life for patients and their loved ones.

Taking a compassionate approach that keeps the family involved, we will develop a personal, long-term treatment plan that includes activities to improve the patient's daily life now and in years to come.

Horizon Family Medical Group understands the needs, concerns, and fears of patients and family.

Working closely with your referring primary care physician, nurse practitioner, or physician assistant, Dr. Rima Reitblat, board certified in geriatrics and internal medicine, will conduct consultations that include:

- *Comprehensive geriatric interviews*
- *Physical exam*
- *Screening and evaluation of cognitive functions*
- *Depression testing*
- *Functional assessment.*

Stages helps caregivers by providing

- *Family education*
- *Safety issues assessment*
- *Planning interventions*
- *Assistance with transition to higher levels of care.*

If you are affected by Alzheimer's or other forms of dementia, you're not alone.

***Turn to Stages.
We can help.***
